3 Integration

3.1 Integrations Overview

MGC Web Services API utilizes a SOAP/XML request format.

The current request types are:

- Inquiry – Search for glass and accessories matching your search terms and look up price, availability, alternatives, and more
- Order – Order one or many specific glass items or accessories for delivery or Will Call
- Return – Coming Soon!

MGC Web Service Interface is an HTTP interface between systems using SOAP/XML.

The services can be accessed from the following URLs:

Production: <https://webservice.mygrantglass.com/v2/CoRE650WebService.asmx>

Test: <https://webservice-staging.mygrantglass.com/v2/CoRE650WebService.asmx>

A WSDL (Web Services Description Language) is available for all services by appending “?wsdl” to the address above.

3.2 Authentication with API Key

MGC Web Services require the use of an API key which can be generated by the customer after the customer’s API User onboarding is completed.

To use this key in your request, include it in an HTTP Header called AuthToken

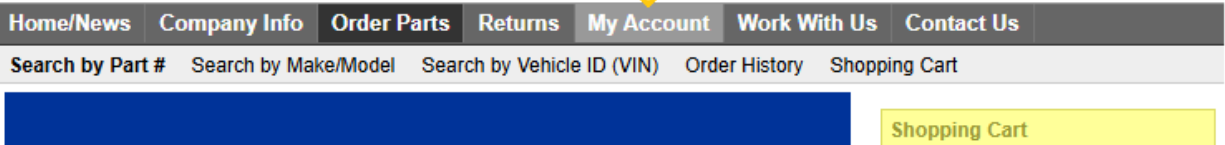

```
POST https://webservice.mygrantglass.com/CoRE650WebService.asmx HTTP/1.1
Accept-Encoding: gzip,deflate
Content-Type: text/xml; charset=UTF-8
SOAPAction: "http://tempuri.org/InboundTraffic"
AuthToken: YourAPIKEYHere
```

The customer can generate the keys by logging into the MygrantGlass.com website.

After login, navigate to My Account

Welcome [Change Ship-To](#) [Logout](#)
